RE: Standish Water District Lead Service Line Inventory

The Town of Saranac has been required to conduct a Lead Service Line Inventory of the Standish Water District. The Inventory has been completed, and all of the Water District's current water lines were installed after the June 1986 ban on the use of products containing lead in drinking water infrastructure, there are no components of the Standish WD's infrastructure that contain lead materials.

The Town routinely conducts Lead and Copper sampling in all Districts and the results of those samplings are included in the Annual Water Quality Reports (AWQRs) provided to customers. The AWQRs also contain the following additional information about Lead in drinking water and are available on the Town's website.

We are required to present the following information about lead in drinking water:
If present, elevated levels of lead can cause serious health problems, especially for pregnant women, infants, and young children. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. Redford Water district is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <http://www.epa.gov/safewater/lead>.

Town of Saranac is an equal opportunity provider and employer.
